Abstract | Replace this paragraph with the paper's abstract. Introduce the problem, explain the approach, summarize the evidence, and state the conclusion. This sample text demonstrates the supplied title and abstract layout.

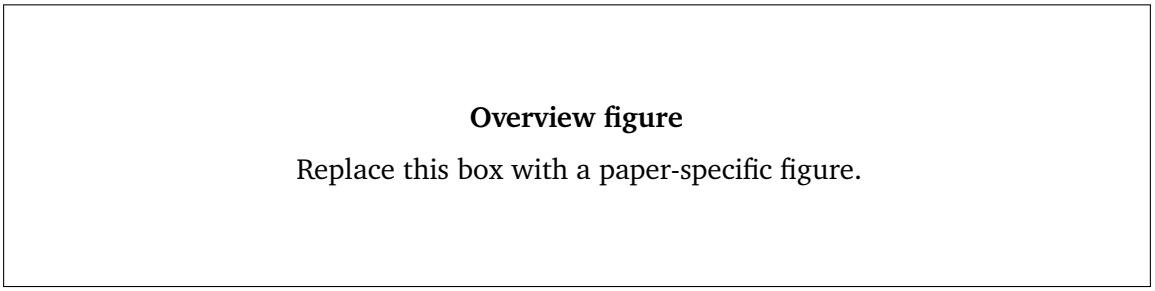

Figure 1 | An illustrative overview placeholder. Replace the box and caption together.

A Additional Details **4**

1. Introduction

Introduce the problem, motivation, and contributions. Refer to Figure 1 for the overview. Example citations are Knuth [1984] and [Lamport, 1994].

2. Related Work

Explain how previous approaches relate to the question addressed by the paper. Replace the sample references with the relevant literature.

3. Method

Introduce the notation and approach. This equation illustrates the math fonts and equation numbering:

$$p(y \mid x) = \frac{\exp s(x, y)}{\sum_{y' \in \mathcal{Y}} \exp s(x, y')}. \tag{1}$$

Here, x is an input, y a candidate output, $\mathcal{Y}$ the finite candidate set, and s a scoring function. Replace this illustrative equation with the paper's definitions.

3.1. Procedure

Describe each step and its purpose, referring to Equation (1) as needed.

4. Experiments

Describe the evaluation questions, setup, and measured outcomes. Table 1 is a formatting example.

Table 1 | Example table describing the template's source structure.

File	Purpose
`main.tex`	Title and document structure
`preamble.tex`	Shared packages and formatting
`branding.tex`	First-page header configuration

5. Discussion

Interpret the evidence, its scope, and the limitations of the study.

6. Conclusion

Summarize the question, approach, and conclusion supported by the evidence.
